

# Contents

<b>Preface</b>	<b>xxiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Displays: Bird’s-Eye View . . . . .	4
1.2 Milestones of Display Technology . . . . .	5
1.2.1 Early 1400s to Late 1800s: The Optical Era . . . . .	6
1.2.2 Late 1800s to Early 1900s: The Electromechanical Era . . . . .	8
1.2.3 Early and mid-1900s: The Electronic Era . . . . .	10
1.2.4 Late 1900s to Early 2000s: The Digital Era . . . . .	11
1.2.5 The Fascination of Three Dimensions . . . . .	14
1.3 Organization of the Book . . . . .	18
<b>2 Fundamentals of Light</b>	<b>25</b>
2.1 Introduction . . . . .	25
2.2 Electromagnetic Radiation . . . . .	27
2.3 Principles of Light Generation . . . . .	28
2.3.1 Thermal Radiation . . . . .	31

## *Contents*

---

	Radiation, Absorption and Efficiency . . . . .	32
2.3.2	Applications of Thermal Radiation Laws . . . . .	38
2.3.3	Open Systems and the Greenhouse Effect . . . . .	40
2.3.4	Color Temperature . . . . .	42
2.3.5	Bremsstrahlung . . . . .	44
2.3.6	Photon Energies . . . . .	46
2.3.7	Electron Excitation . . . . .	47
2.3.8	Gas Discharge . . . . .	49
	Plasma Lamps . . . . .	50
	Arc Lamps . . . . .	50
	Phosphors . . . . .	51
	Fluorescent Lamps . . . . .	53
	Other Forms of Luminescence . . . . .	53
2.3.9	Electroluminescence . . . . .	54
	LED . . . . .	54
	OLED . . . . .	55
	Laser . . . . .	56
2.4	Measuring Light . . . . .	56
2.4.1	Radiometry . . . . .	57
	Angular Range . . . . .	57
	Lambert Emitters . . . . .	58
	Solid Angle and Angular Density . . . . .	58
	The Ulbricht Sphere . . . . .	60

## *Contents*

---

2.4.2	Photometry . . . . .	61
2.4.3	Luminous Efficiency of Light Sources . . . . .	65
2.4.4	Durability of Light Sources . . . . .	66
2.5	Physics of Light . . . . .	67
2.5.1	Interference . . . . .	67
2.5.2	Quantum Effects . . . . .	68
2.5.3	The Double-Slit Experiment . . . . .	74
	The Uncertainty Principle . . . . .	80
2.5.4	Fourier Spectrum . . . . .	83
2.5.5	Radiation Processes Revisited . . . . .	86
2.5.6	Tunneling . . . . .	87
2.5.7	Quantum Dots . . . . .	89
2.5.8	Polarization . . . . .	91
	Polarizer Filters . . . . .	92
	Polarization and Quantum Physics . . . . .	93
	Turning Polarization . . . . .	95
2.5.9	Circular Polarization . . . . .	96
	Producing Circular Polarized Light . . . . .	98
2.6	Summary . . . . .	98
<b>3</b>	<b>Principles of Optics</b>	<b>101</b>
3.1	Introduction . . . . .	101
3.2	Wave Optics . . . . .	103
3.3	Geometric Optics . . . . .	108

## *Contents*

---

3.3.1	Light Modulation . . . . .	109
	Scattering . . . . .	109
	Refraction . . . . .	111
3.3.2	Homogeneous vs. Inhomogeneous Media . . . . .	117
3.3.3	Snell's Law Vectorized . . . . .	118
3.4	Formation of Point Images . . . . .	121
3.4.1	Reflective Optics . . . . .	122
	Planar Mirrors . . . . .	123
	Spherical Mirrors . . . . .	124
	Concave Parabolic Mirrors . . . . .	124
	Convex Parabolic Mirrors . . . . .	127
	Varifocal Mirrors . . . . .	127
3.4.2	Refractive Optics . . . . .	128
	Lenses . . . . .	129
	Converging Lenses . . . . .	131
	Diverging Lenses . . . . .	133
	Plane Parallel and Curved Parallel Lenses . . . . .	133
	Apertures . . . . .	134
	Vignetting . . . . .	137
	Varifocal Lenses . . . . .	138
	Fresnel Lenses . . . . .	140
	Lens Resolution . . . . .	141
	Depth of Field . . . . .	143

## *Contents*

---

3.5	Lasers . . . . .	145
3.5.1	Stimulated Emission . . . . .	145
3.5.2	Laser Beam Divergence . . . . .	152
3.5.3	The Plenoptic Function . . . . .	156
3.6	Summary . . . . .	160
<b>4</b>	<b>Basics of Visual Perception</b>	<b>161</b>
4.1	Introduction . . . . .	161
4.2	The Human Visual System . . . . .	163
4.2.1	The Eye as an Optical System . . . . .	163
4.2.2	Saccades . . . . .	164
4.2.3	Temporal Response . . . . .	165
4.2.4	Contrast and Dynamic Range . . . . .	166
4.2.5	Resolution . . . . .	170
4.3	Colorimetry . . . . .	172
4.3.1	CIE Color-Matching Functions . . . . .	174
4.3.2	The CIE Chromaticity Diagram . . . . .	178
4.3.3	Color Separation of the Eye . . . . .	180
4.3.4	Color Recording . . . . .	182
4.3.5	Neuro-Physiological Results . . . . .	185
	Retinal Image Processing . . . . .	186
4.4	Depth Perception . . . . .	189
4.4.1	The Human Visual Field . . . . .	191
4.4.2	Depth Cues . . . . .	193

## *Contents*

---

Convergence . . . . .	193
Retinal Disparity . . . . .	194
Accommodation . . . . .	196
Focus Effects . . . . .	199
Haze . . . . .	200
Color . . . . .	200
Motion Parallax and Motion Dynamics . . . . .	201
4.4.3 Stereo Picture Recording . . . . .	205
4.5 Motion Pictures . . . . .	206
4.5.1 Pitfalls . . . . .	206
4.5.2 Film Projection . . . . .	208
4.6 Summary . . . . .	209
<b>5 Holographic Principles</b>	<b>211</b>
5.1 Introduction . . . . .	211
5.2 Holography: A Summary . . . . .	214
5.2.1 Holographic Object Recognition . . . . .	216
5.2.2 A Basic Hologram Setup . . . . .	217
5.3 Interference and Diffraction . . . . .	220
5.3.1 The Grating Equation . . . . .	223
5.3.2 Holographic Point Formation in Detail . . . . .	225
5.3.3 Phase Holograms . . . . .	228
5.3.4 Embossed Holograms . . . . .	230
5.3.5 Color Dispersion . . . . .	231

## *Contents*

---

5.3.6	Volume Gratings . . . . .	231
	Volume Grating Construction . . . . .	232
	Volume Grating Reconstruction . . . . .	234
	Resolution Requirements . . . . .	238
	Bragg's Law . . . . .	238
	Color Dependency . . . . .	239
5.3.7	Hologram Efficiency . . . . .	240
5.3.8	Holograms and Displays – Basic Considerations . . . . .	241
5.3.9	Temporal Coherence . . . . .	243
5.3.10	Spatial Coherence . . . . .	246
5.3.11	Laser Speckle . . . . .	248
5.4	Holographic Optical Elements (HOE) . . . . .	249
5.4.1	Head-Up Displays . . . . .	250
5.4.2	Construction of a HOE . . . . .	252
	A Detailed Construction Setup . . . . .	253
5.4.3	HOE Angular and Frequency Response . . . . .	254
5.4.4	HOEs vs. Conventional Optics . . . . .	257
5.4.5	Camera Lenses with HOEs . . . . .	259
5.4.6	Virtual HOEs . . . . .	261
5.4.7	Spatial Light Modulators . . . . .	261
5.4.8	Beam Splitters and Diverters . . . . .	262
	Switched HOEs . . . . .	262
5.4.9	Holographic Projection Screens . . . . .	263

## *Contents*

---

5.4.10	Visual Perception of Holograms . . . . .	269
5.4.11	Keyhole Holograms . . . . .	271
5.5	Optical Holography . . . . .	273
5.5.1	Optical Distortion . . . . .	276
5.5.2	Transmission Holograms . . . . .	279
5.5.3	Reflection Holograms . . . . .	280
5.5.4	Rainbow Holograms . . . . .	284
5.5.5	Color Holograms . . . . .	288
5.5.6	Multichannel Holograms . . . . .	291
5.5.7	Holographic Stereograms . . . . .	294
5.5.8	Digital Volumetric Holograms . . . . .	299
5.6	Summary . . . . .	301
<b>6</b>	<b>Display Basics</b>	<b>303</b>
6.1	Introduction . . . . .	303
6.2	Fundamental Measures . . . . .	304
6.2.1	Resolution . . . . .	305
	Digital vs. Analog . . . . .	310
6.2.2	Interlacing . . . . .	311
6.2.3	TV Standards . . . . .	314
	Eye Resolution and Displays . . . . .	318
6.2.4	Brightness . . . . .	321
6.2.5	Contrast and Dynamic Range . . . . .	322
6.2.6	Gamma . . . . .	324

## *Contents*

---

6.2.7	Angular Range . . . . .	326
	Viewing Cone . . . . .	326
6.2.8	Speed . . . . .	329
6.3	Color and Intensity Production . . . . .	330
6.3.1	Color Gamut . . . . .	331
6.3.2	Wide-Color-Gamut Displays . . . . .	331
6.3.3	Multicolor Displays . . . . .	333
6.3.4	Additive and Subtractive Color Mixing . . . . .	335
	Subtractive Color Mixing . . . . .	336
6.3.5	YUV-Formats . . . . .	337
6.3.6	Dyes and Filters . . . . .	340
6.3.7	Light Sources . . . . .	341
6.3.8	Luminescent vs. Light Valve Displays . . . . .	342
6.3.9	Test Pictures . . . . .	343
6.4	Signal and Image Processing . . . . .	346
6.4.1	Signal Transmission . . . . .	346
6.4.2	The Sampling Theorem . . . . .	348
	Dirac Pulse Series . . . . .	350
	Pulses and Sampling . . . . .	351
	Fourier Transform of the Dirac Series . . . . .	353
	Back to Analog . . . . .	354
6.4.3	Tonal Resolution, Signal Noise, and Transfer Function . . . . .	355
6.4.4	Antialiasing . . . . .	356

## *Contents*

---

6.4.5	Moiré . . . . .	358
6.4.6	Resizing . . . . .	360
6.4.7	Noise Reduction . . . . .	361
6.4.8	Image Compression . . . . .	362
6.4.9	Deinterlacing . . . . .	365
6.5	Electronics . . . . .	370
6.5.1	Semiconductors . . . . .	370
6.5.2	Passive Matrix Displays . . . . .	376
6.5.3	Multiplexing and Connection . . . . .	376
6.5.4	Active Matrix Displays . . . . .	379
6.6	Assembly . . . . .	386
6.6.1	Panel Construction . . . . .	386
6.6.2	Backlighting . . . . .	387
6.6.3	Antireflective Coatings . . . . .	389
	Sol-Gel Coating . . . . .	391
6.6.4	Touch Screens . . . . .	392
	Force Sensors . . . . .	393
	Surface Wave Detection . . . . .	394
	Light Grid and Optical Imaging . . . . .	395
	Bidirectional Display Touch Detection . . . . .	396
	Resistive Panels . . . . .	397
	Percolation . . . . .	398
	Quantum Tunneling Composite (QTC) . . . . .	398

## Contents

10.13.3 Mask Displays . . . . .	807
Pupilla Size . . . . .	810
Technologies for Mask Displays . . . . .	815
10.14 Summary . . . . .	818
<b>11 Discussion and Outlook</b>	<b>820</b>
11.1 Introduction . . . . .	820
11.2 Next Steps in Display Technology . . . . .	821
11.3 A Short Reflection on Displays . . . . .	824
11.4 Brain-Computer Interfaces – The Ultimate Solution? . . . . .	826
11.4.1 Retinal Implants . . . . .	829
11.4.2 Neural Implants . . . . .	833
<b>Appendix: Image Processing for Displays</b>	<b>838</b>
A The Fixed Function Graphics Pipeline . . . . .	839
A.1 Transformations . . . . .	842
A.2 Rasterization . . . . .	844
A.3 Frame-Buffer Operations . . . . .	844
B The Programmable Graphics Pipeline . . . . .	846
C Graphics Hardware . . . . .	847
D GPU Programming Languages . . . . .	850
D.1 High-Level Shading Languages . . . . .	850
GLSL . . . . .	851
Cg . . . . .	851

	Other Languages . . . . .	851
D.2	General Purpose Computation on the GPU . . . . .	852
	Nvidia CUDA . . . . .	853
	ATI Stream . . . . .	853
	DirectX Compute Shaders . . . . .	853
	OpenCL . . . . .	854
E	An Introduction to GPU Programming by Example . . . . .	854
F	The Swiss Army Knife of GPU Image Processing . . . . .	859
F.1	Basic Shaders . . . . .	859
F.2	Homography Warping via Vertex Shading . . . . .	865
F.3	Compensation of Interreflection via Dependent Texture Lookups . . . . .	867
F.4	Histogram Calculations with Geometry Shading . . . . .	869
F.5	Anaglyph Rendering via Fragment Shading . . . . .	872
F.6	Color Space Conversion via Fragment Shading . . . . .	874
F.7	Image Undistortion via Fragment Shading . . . . .	879
F.8	Convolution via Fragment Shading . . . . .	881
F.9	Fast Fourier Transformations via CUDA . . . . .	883
